Auto Ticket Classification using Flow Designer

PHASE 2: Backend Development & Configuration

Project Overview

This phase creates the custom table and fields required to store school IT ticket records, configures choice values, and links Subcategory to Category.

Objective

Provide a structured ticket table with correct field types, reference fields, choices, and dependent choice behavior.

Skills

Custom tables • Field configuration • Choice lists • Dictionary configuration • Dependent fields

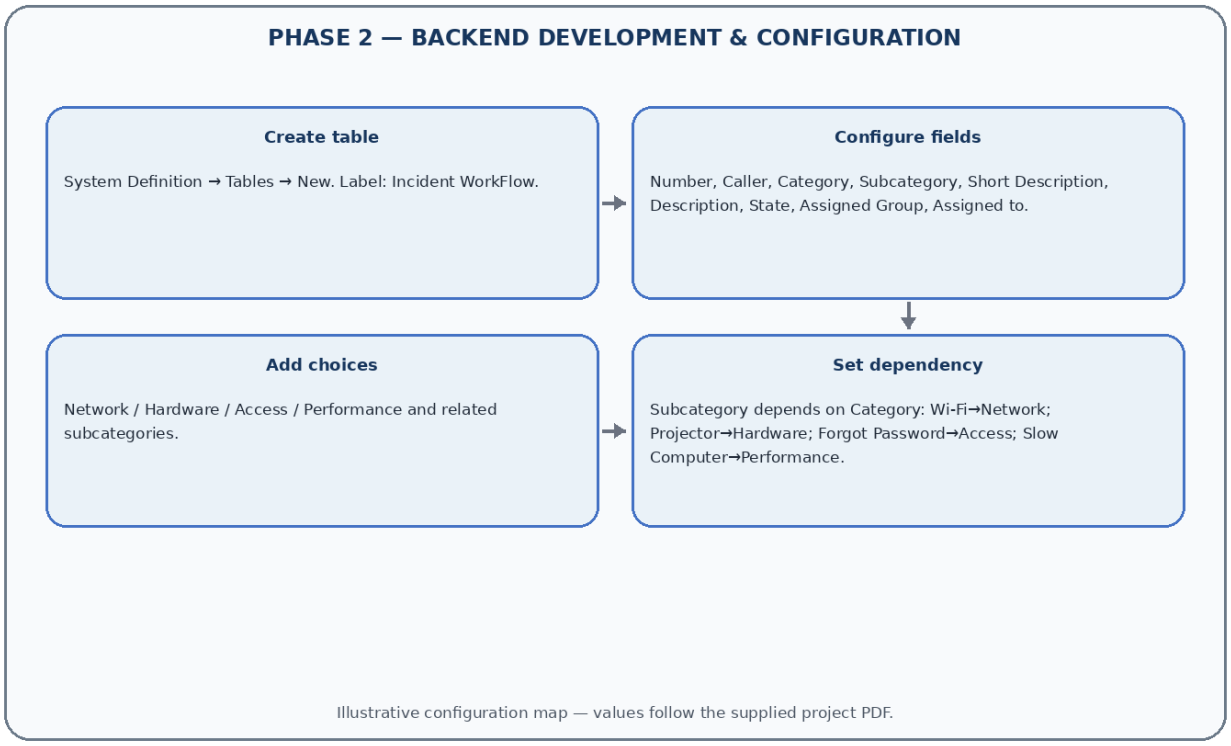

Figure: Illustrative process diagram. It is not a captured ServiceNow screen.

Activity 1: Creation of Custom Table

1. Open All menus and search for Tables.
2. Under System Definition, select Tables.
3. Click New.
4. Set Label: Incident WorkFlow.
5. Uncheck Create module.
6. Save the form.
7. Open Controls and enable Auto Number.
8. Save again.
9. Use the related link Show Form.

10. Open the form context menu and choose Form Designer.

Activity 2: Field Creation and Data Type Configuration

Create the following fields in Form Designer. Use the field type and reference/choice values listed below.

Field Label	Type	Reference / Choice
Number	Auto Number	—
Caller	Reference	sys_user
Category	Choice	Network, Hardware, Access, Performance
Subcategory	Choice	Wi-Fi, Projector, Forgot Password, Slow Computer
Short Description	String	—
Description	String	—
State	Choice	New, In progress, On hold, Resolved, Closed
Assigned Group	Reference	sys_user_group
Assigned to	Reference	sys_user

After creating the fields, add the listed choices to Category, Subcategory, and State. Save the form and reload it.

Activity 3: Dependency Between Category and Subcategory

1. Open the created table form and right-click the Subcategory field.
2. Select Configure Dictionary.
3. Under Related Links, open Advanced view.
4. Locate the Dependent Field section and enable Use dependent field.
5. Set Dependent on to Category and save.
6. In the choice section, map each Subcategory to the matching Category backend value.
7. Save the form and reload it to verify that Subcategory options follow Category.
