Auto Ticket Classification using Flow Designer

PHASE 3: Flow Designer Automation & Email Notification

Project Overview

When a new IT support ticket is submitted, Flow Designer checks the Short Description and automatically assigns Category and Subcategory. It then sends an acknowledgement email to the caller.

Objective

Automate classification for common ticket types and notify the caller without requiring manual categorization.

Skills

Flow Designer • Record Created trigger • If / Else If logic • Update Record action • Send Email action

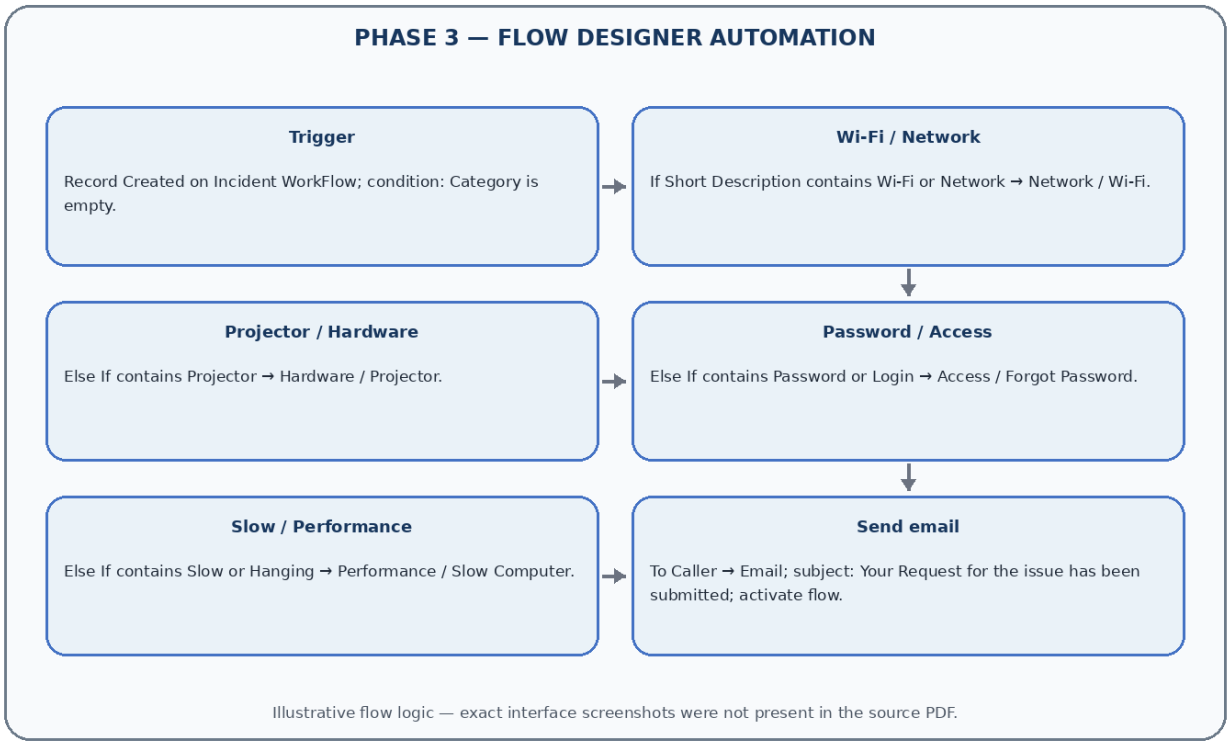

Figure: Illustrative process diagram. It is not a captured ServiceNow screen.

Activity 1: Create Flow

1. Open All menus and search for Flow Designer.
2. Under Process Automation, open Flow Designer.
3. Click New and select Flow.
4. Name: Auto Classify School IT Tickets.
5. Application: Global.
6. Click Build Flow.

Activity 2: Trigger Configuration

Trigger: Record Created.

Table: Incident WorkFlow.

Condition: Category is empty.

Click Done.

Activity 3: Classification Conditions

Wi-Fi / Network: if Short Description contains Wi-Fi or Network, update Category = Network and Subcategory = Wi-Fi.

Projector: else if Short Description contains Projector, update Category = Hardware and Subcategory = Projector.

Password / Login: else if the description contains Password or Login, update Category = Access and Subcategory = Forgot Password.

Slow / Hanging: else if the description contains Slow or Hanging, update Category = Performance and Subcategory = Slow Computer.

Activity 4: Email Action Setup

1. Add a Send Email action after classification.

2. To: Caller → Email.

3. Subject: Your Request for the issue has been submitted.

4. Body: provide a ticket confirmation message.

5. Click Done, then Activate the flow.
