Auto Ticket Classification using Flow Designer

PHASE 5: Deployment & Final Documentation

Project Overview

The final phase marks the project Update Set as complete and exports it as XML so the configuration can be transferred to another ServiceNow environment.

Objective

Prepare a stable, reusable project package and retain clear documentation for demonstration and future reference.

Skills

Update Set management • Deployment preparation • XML export • Technical documentation

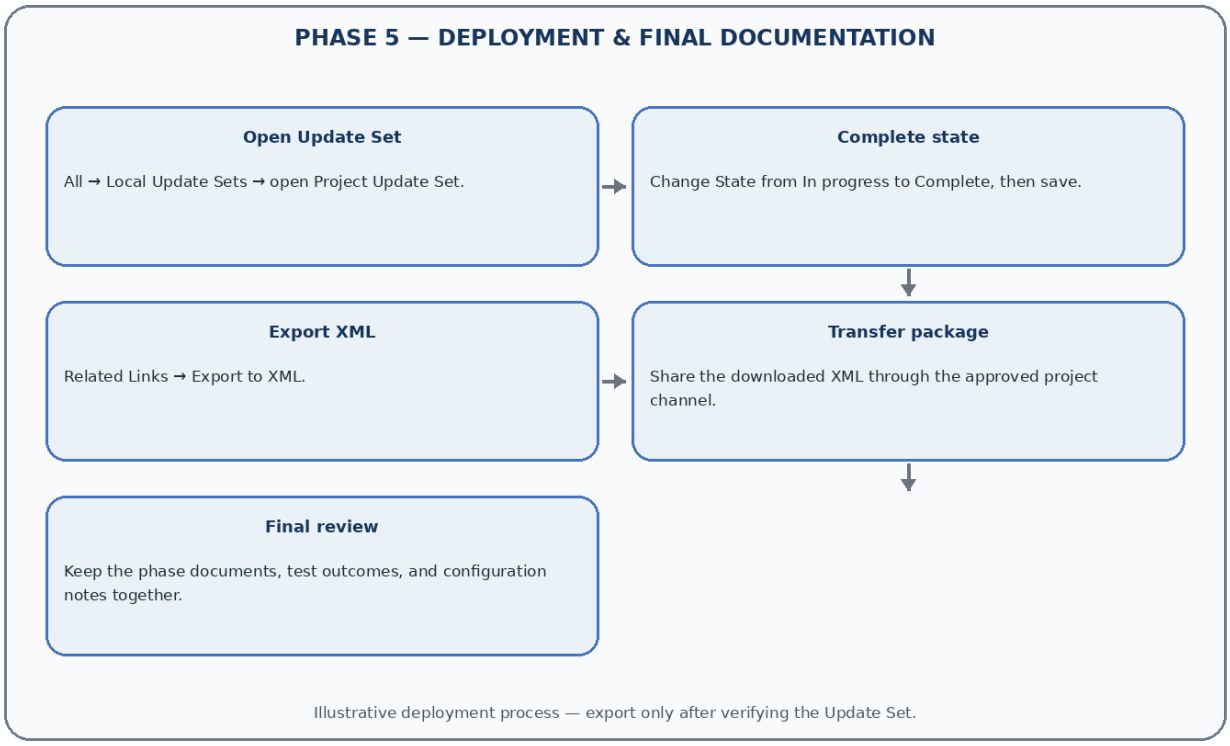

Figure: Illustrative process diagram. It is not a captured ServiceNow screen.

Activity 1: Make Update Set Complete

1. Open All menus and search for Local Update Sets.
2. Under System Update Sets, select Local Update Sets.
3. Open Project Update Set.
4. Change State from In progress to Complete.
5. Save the form.

Activity 2: Export Update Set to XML

1. Under Related Links, click Export to XML.
2. Save the downloaded XML file to your computer.
3. Share the XML file through the approved project channel, such as email or the project workspace.

4. Import the Update Set in the target instance and preview/commit it according to your organization’s deployment process.

Activity 3: Final Documentation Checklist

Keep the project objective, configuration steps, flow logic, test scenarios, and results together.

Record any test failures and corrections before demonstrating the project.

Confirm that the flow is active and the Update Set contains the intended configuration.

Conclusion

The Auto Ticket Classification using Flow Designer project automates common school IT ticket categories, reduces manual classification, improves consistency, and sends an acknowledgement email to the caller. The solution uses a phased configuration approach and can be extended with additional categories and routing rules.
